

Chopper's Choice™ Corn Silage Inoculant

Chopper's Choice™ inoculants provide a high concentration of crop specific inoculant that matches each crop to produce a higher concentration of organic acids, drop pH faster and out-compete spoilage organisms for improved bunk life and less wasted feed.

Features

- Crop-specific bacteria
 - Adapted to the specific plant sugars
 - Produces more organic acids
 - Drops the pH faster
 - Out-competes spoilage organisms
- Water soluble formula
 - Goes to work faster
 - Improves application
 - Delivers more live bacteria to the crop
- Research proven
 - In laboratory trials
 - On farm research
- Unique stabilization technology
 - Maintains bacterial viability
 - Prevents applicator clogging

Benefits

- Retains more plant nutrients
- Improves palatability
- Improves bunk-life
- Less wasted feed

What to look for in an inoculant

- Must have viable lactic acid bacteria
- Applies at a minimum of 100,000 cfu/g
- Produces lactic acid and other acids
- Grows over a wide pH range
- Ferments the specific crop sugars
- Applied via water for best results

**The Results—
Better Quality Corn Silage!**
